Forage
Supreme

Agronomy Return Policy

A friendly reminder of our return policy: All returns must be made in resalable condition and within the posted timeframes.

Fall Wheat Fertility Reminders

As spring approaches, soon will be the time to assess your fall wheat stand and apply nitrogen and other required nutrients to set the stage for a profitable 2012 crop. A split application of nitrogen may be advantageous to promote early tillering on some of our late planted wheat. If split applying nitrogen, the first application could be applied mid March, with the balance in late April. If applying all your nutrient requirements in one application, this would generally be timed during the third or fourth week of April when field conditions allow.

When discussing your wheat fertility plans with your County Farm Centre crop advisor, remember

Don't forget to check out

to discuss the benefits of adding ammonium sulfate to the blend. We have found that some of our crops are responding positively to added sulfur. Also, keep in mind that 80 bu/ac of winter wheat removes approximately 30 lbs/ac of potassium (assuming that the straw is spread back on the field)! Adding potash to the blend is easy to do and relatively inexpensive as we are already going over the field anyway. We need to be aware of crop removal rates of our nutrients to avoid mining our soils to keep them productive in years to come. You can discuss these ideas and other production ideas with your County Farm Centre representative.

Fuel Section

County Farm Centre Fuels offer our Farm and Commercial customers an exciting worry-free Price Protection Plan. Price Guard enables you to establish a ceiling on your fuel prices for up to six months. This program protects you against rising fuel prices, while offering the benefit of paying a lower price if market prices decrease.

Talk to Tim Davey to determine if this is a good option for your business.

We want to keep you warm. So if you are phoning in a home heating oil order, remember to give us 3 business days to process your order. Jamie is always happy to hear from you at 1-866-924-2322 and will ensure your tank is filled.

You might be a farmer if...
You can tell it's a farmer working late in his field, know who it is, what they're doing and not think it's a UFO.

Feed Corner

Mastercalf 24% Calf Starter!

Over the last six months or so we have been conducting some calf trials with our new Mastercalf 24% Calf Starter and I am so happy with the success that we are experiencing. We continue to outdo the competition in ADG (average daily gain) and height. Producers have seen a dramatic improvement in consumption of calf starter.

We consistently see calves doubling their birth weight and growing 6-7 inches taller in the first eight weeks of life! Exciting news knowing that a fast efficient growing young calf will not only be a fast efficient growing heifer but research proves that.... She will milk 800-1000 liters more in her first lactation!

If you are interested in knowing more about our Mastercalf 24% Calf Starter please call or email.

Thanks,

Mike Ingram
