Please take note of County Farm Centre's return policy on agronomic products.

Returns must be made in resalable condition and within the posted timeframes.

All seed must be returned **by June 15, 2013**

Agronomy Corner

First cut is just around the corner. Make sure you talk to us about **SilagePro**.

Higher quality silage builds a lower cost ration. More profit per cow. Treat your silage for a low cost of \$1.35 per tonne.

High quality silage doesn't happen by accident. Farmers go to great effort and expense to produce the very best fermented forages for their livestock. The application of SilagePro inoculant is a proven practice to ensure you are doing all you can to control the fermentation process and feed a top quality ration.

SilagePro alters the microbial process - pH drop is accelerated, less heat is produced, fermentation takes days, not weeks and fiber digestibility is increased - dramatic differences that can be measured by forage analysis and animal response.

Maximize Every Bite with **SilagePro!**

- IN-STORE DEALS -

Canada Day is quickly approaching. Don't forget your Canadian flag the next time you're at County Farm Centre. We have plenty of sizes and styles to choose from.

10-Pack
 Men's and Ladies
 Ankle Socks

\$2.00

#070-5318 / #070-7352

Irregular T-Shirts
 Assorted sizes
 and colours

4 FOR \$10.00

#2800105

Hienz Condiments
 Picnic Pack

\$4.99

#02984

Straw Hats
 Assorted sizes
 and styles

Starting at \$2.00

Feed Section

- Beat the Heat -

Tips on how to beat the heat this summer and produce more milk and fat!

1. Arm & Hammer's DCad Plus source of Potassium Carbonate. This product is like feeding Gatorade to dairy cows! Helps keep'em hydrated and helps replace nutrients that are depleted during times of heat. Start before heat stress starts! At least two weeks prior! (Get help before putting in your ration and don't feed to dry cows)
2. Lick Tubs. Licking helps create saliva which improves buffering ability. Also helps increase intakes. Remember high intakes are key during the heat. Use these for Heifers, Lactating, Dry Cows, and even just weaned calves!
3. WATER! Quantity and Quality! Increase water points throughout the barn. Also make sure bowls and troughs' are clean.
4. Fans. Clean them and help improve their ability to move air. Maybe look at misters over the bunk or in holding area.
5. TMR Moisture. 50% to 55% is ideal for sure.
6. Feed high quality feed to help ensure minimal heating in the bunk.
7. Ration Density. Balance to meet the current Dry Matter Intake.

Good luck! Happy haying! Stay Cool!
