AGRONOMY CORNER

Class 12 Seed Treatment Legislation for the 2018 planting season

Prince Edward County is in Schedule 1, meaning after August 31, 2017 you are required to have a Professional Pest Advisor complete the pest assessment report for your fields.

For the 2018 planting season you are required to have the following to plant Class 12 seed:

1. Have completed the Integrated Pest Management (IPM) course.
2. A signed IPM declaration form
3. A completed pest assessment report*

***if your property is in Prince Edward County this must be completed by a Professional Pest Advisor**

Please note a pest assessment report can either be:

1. Soil inspection pest report, which must be completed by a Professional Pest Advisor if in Prince Edward County, otherwise an IPM-certified person can complete the report.
2. Crop inspection pest report, which can only be done by a professional pest advisor

If you plant non-Class 12 treated seed (not treated, fungicide only or non-neonic insecticide) there is no required paperwork.

County Farm Centre is offering bait trap setup/monitoring and pest assessment paperwork services for a fee.

For more information contact any sales representative.

STORE NEWS

Winter is on its way, time to prepare before you are left out in the cold. We have cold weather hats, gloves scarves, boots and coats to keep your family nice and warm this season.

Be sure to pick up a few bags of salt before the freeze!

Need a little extra heat? In stock we have a wide range of heaters for all of your needs.

ENERGY DIVISION

Summer is over, let the home heating months begin! Time for those last-minute furnace filter changes and to fill those furnace tanks for the upcoming winter. County Farm Centre propane is a reliable, safe, efficient source of clean-burning fuel that's friendly to the environment. We provide bulk propane as well as home, farm and commercial deliveries.

As always, County Farm Centre also delivers furnace oil - a reliable energy source that provides your home with comfortable, affordable heat.

And Do not forget, with Christmas right around the corner, we have a HUGE range of Melissa & Doug toys, not to mention Case and John Deere farm toys.

273 Bethel Rd. Picton

Starts at 11:00 am – 2:00 pm
with Lunch Included
Hope to see you there!

Mycotoxin Madness – Controlling feed bunk losses, Derek Wawack – MIKO On-Farm Technical Specialist

Derek Wawack graduated from the University of Minnesota, Crookston earning a bachelor's degree in Animal Science. Joining Alltech in March of 2011 after graduation, he has found a niche in the MIKO On-Farm Program.

Taking a more proactive approach to mycotoxins and feed quality at the farm, Derek includes looking into everything from the feed, to the cows, to the manure while utilizing many different tools and programs such as the 37+ program and infrared technology to evaluate quality and performance of the feed. Derek visits farms for both troubleshooting and also some on a regular basis to monitor the cows, stored forages and feeds. He shares with the producer, nutritionist and veterinarians areas where improvements could be implemented from a storage forage management standpoint to improve quality and cow performance.

Sales and Support Manager, Alltech Canada for Central and Eastern Ontario, where he provides specialized support in understanding rumen function and mycotoxin management.

Brent graduated with honours in Dairy Cattle Science from Kemptville College and has over 20 years of experience helping farmers improve profitability. Passionate about dairy cattle health and technology, Brent's message is how producers can easily incorporate feeding solutions to enhance on farm feeds and performance.
